

Name: _____ Date: _____

Topic 16 Assessment: 3.MD.D.8

Level 2:

1. **Choose a word from the chart to complete the sentences.**

Perimeter area

The distance around a figure is called _____.

_____ is the number of unit squares needed to cover a region

2.

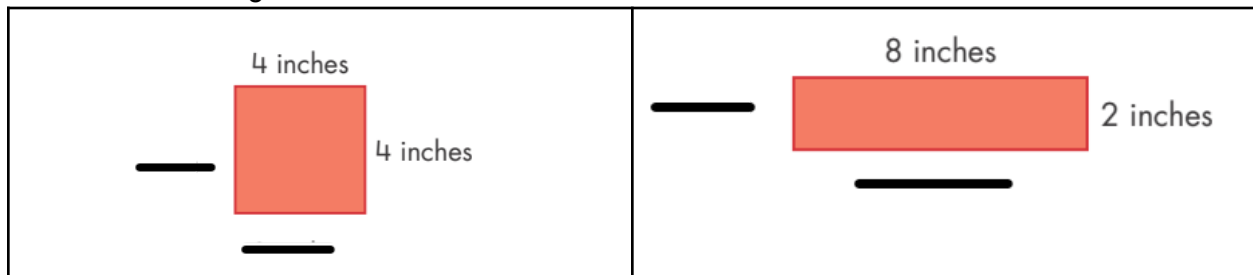

$$2 + 2 + 2 + 2 = \underline{\hspace{2cm}}$$

$$14 + 15 + 14 + 15 = \underline{\hspace{2cm}}$$

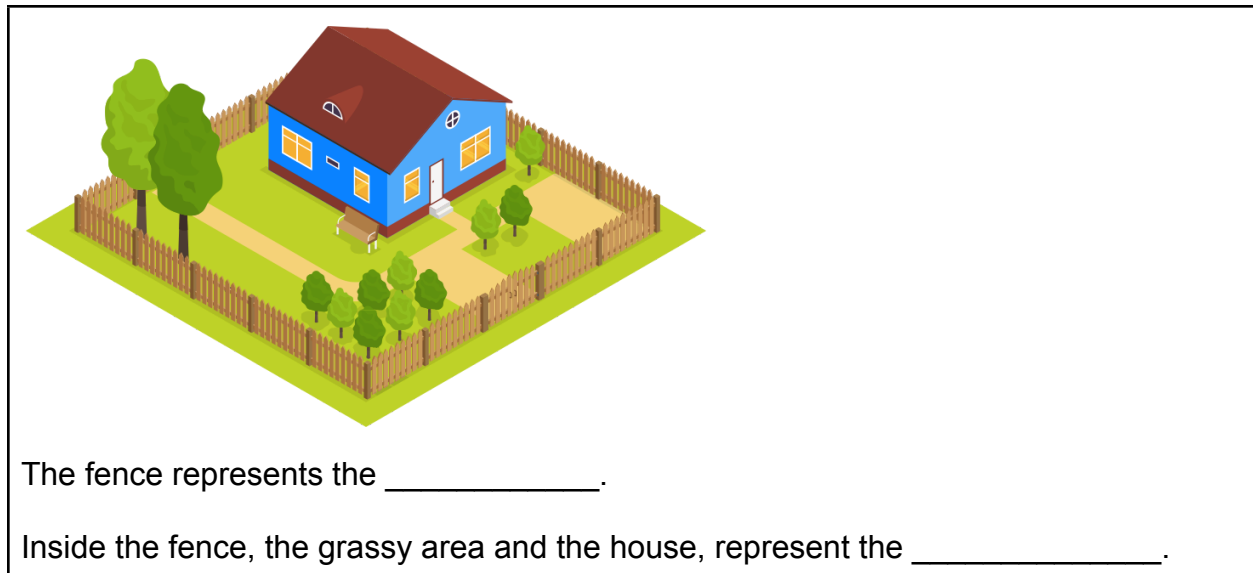

$$9 + 8 + 9 + 8 = \underline{\hspace{2cm}}$$

$$7 + 13 + 14 + 21 = \underline{\hspace{2cm}}$$

3. Fill in the missing sides.

4. Label the area and perimeter.

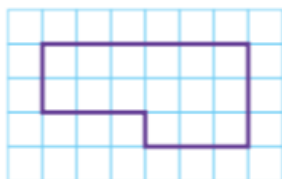

Name: _____ Date: _____

Topic 16 Assessment: 3.MD.D.8

Level 3:

5.

What is the perimeter of the garden shown in the diagram below?

scale: $\text{---} = 1 \text{ ft}$

_____ ft

6.

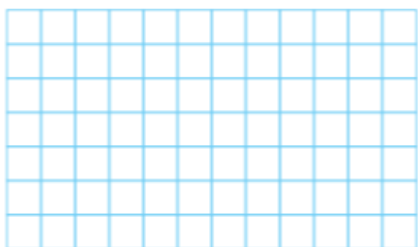

What is the perimeter of the polygon shown below?

_____ ft (edit - friendly numbers)

7.

On the grid below, draw a figure with a perimeter of 20 units.

8.

Calculate the perimeter:

Equilateral triangle

P = _____ yds

Name: _____ Date: _____

Topic 16 Assessment: 3.MD.D.8

9.

Calculate the perimeter:

Rectangle

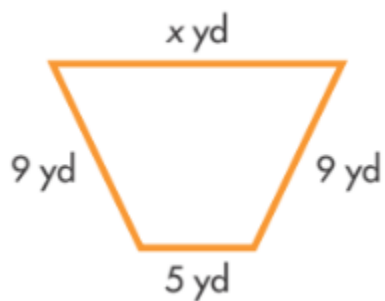

P = _____ ft

10.

Find the missing side length:

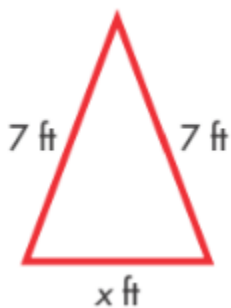

perimeter = 37 yd

X = _____ yds

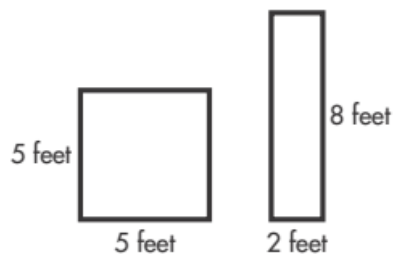

11.

perimeter = 18 ft

12.

Tony drew two shapes. Select all of the statements that are true about the shapes.

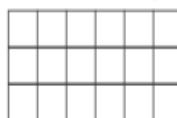

- ☐ The shapes have different perimeters.
- ☐ The shapes have different areas.
- ☐ The shapes have the same perimeter.
- ☐ The shapes have the same area.
- ☐ The square has a greater area than the rectangle.

13.

1st Rectangle

2nd Rectangle

3rd Rectangle

Which rectangle has the greatest perimeter? _____

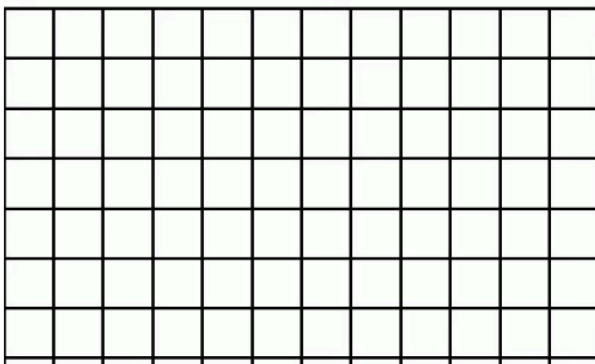

Name: _____ Date: _____

Topic 16 Assessment: 3.MD.D.8

14.

Use the grid paper to draw two different rectangles with the same perimeter:

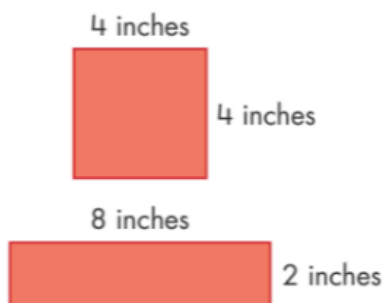

10 inches

15.

Lakisha draws two rectangles. Which statement is true about Lakisha's rectangles?

- Ⓐ They have the same dimensions.
- Ⓑ They have the same shape.
- Ⓒ They have the same perimeter.
- Ⓓ They have the same area.

Name: _____ Date: _____

Topic 16 Assessment: 3.MD.D.8

Level 4

16.

Mary's bedroom rug is shown below.

A. Find the perimeter and area of the rug.

B. Could a square with whole-number side lengths have the same perimeter as the rug? The same area? Explain.
